# How to Install Silky Rider

Check to see if the control cord of the curtain is working properly and also in the right place (50 inches height)

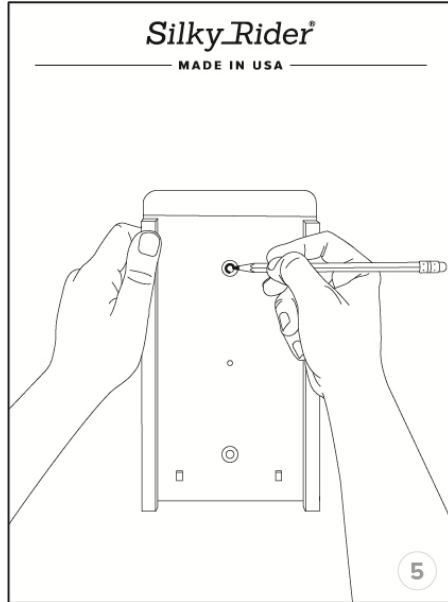

Put a pen into the loop of the cord and pull it downward.

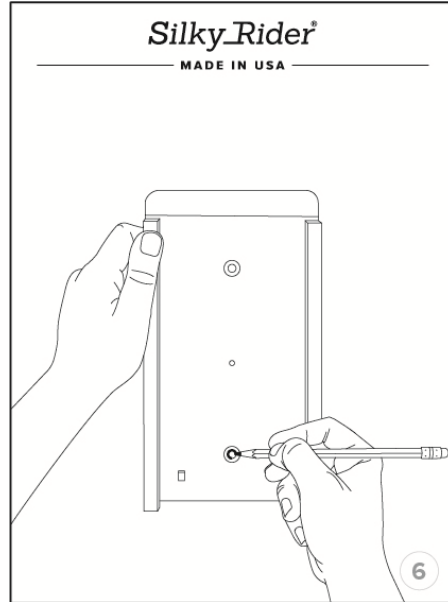

With your other hand get the "Rail" and put it on the wall with face up position where the pen which is into the loop is against it.

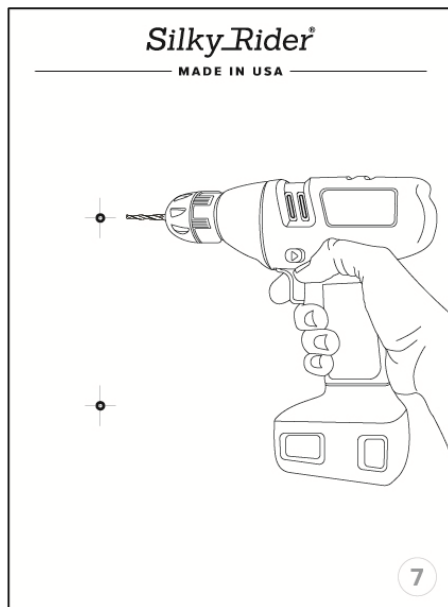

Adjust the "Rail" in a drawer type manner until the Installation Point is covered by the pen head.
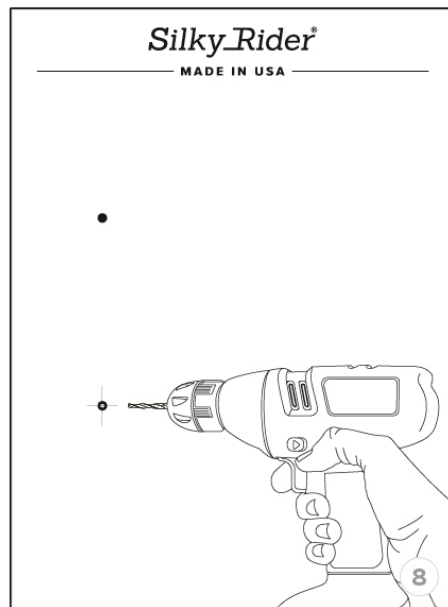

5

The "Rail" is now on the right place, on the wall right below the cord, map it on the wall.

6

The "Rail" is now on the right place, on the wall right below the cord, map it on the wall.
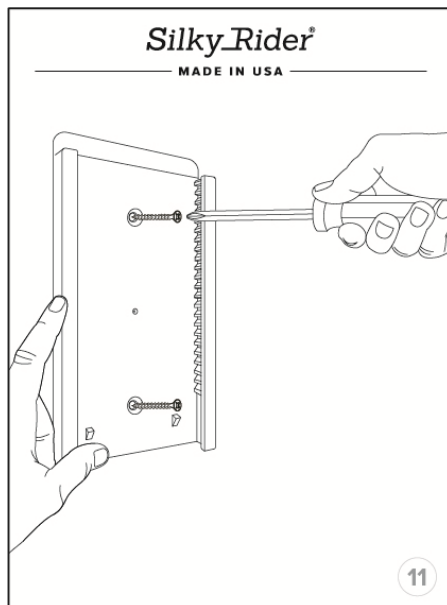

7
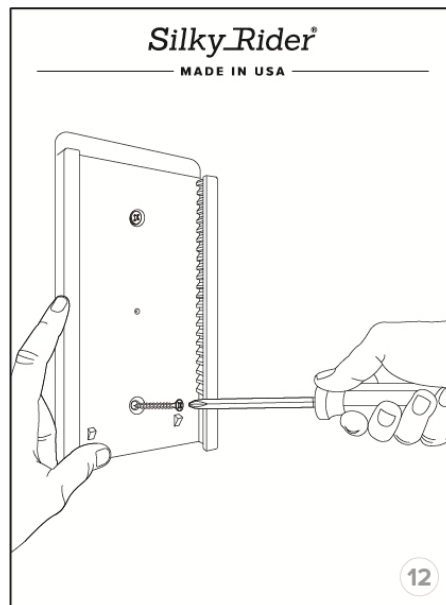

Drill the two marked holes.

8

Drill the two marked holes.
